

V:STAND

The next level of
Point-of-Sale Marketing
has arrived.

Integrate TV advertising,
large format graphics
and product display.

V:Stand brings it all together 

V:STAND

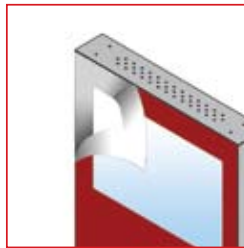

V:Stand is a multi-faceted display and marketing tool that will enhance your business, combining large format graphics, video & audio and product display.

Utilising a 22-inch LCD display with integrated media player and built in speakers, the V:Stand provides a dynamic and informative presence in your display space. The screen can be updated in seconds by simply swapping the memory card from the rear of the unit, and is controlled by a remote control.

The second benefit of the V:Stand is the interchangeable front and rear display faces. Graphics and promotions can be changed within a minute with the V:Stand's magnetic flexi-face, that can be rolled away and stored for a future promotion.

Finally, the V:Stand comes standard with a shelving system where you are able to display the promoted product right there on the stand. With the option of one or two shelves on the front and three on the rear, the V:Stand becomes the ultimate point-of-sale tool that can promote, educate and deliver for your business.

With the V:Stand you can simply remove the graphic skin, replace with a new design and store for future campaigns.

The graphics appearing on the LCD screen can be simply updated by replacing the pre-loaded flash card, accessed from the rear of the unit.

Paragon Display can develop and format your existing brand imaging and A/V or can deliver imaging from a supplied brief.

Contact Paragon Display to view our demonstration unit and discuss options where V:Stand can make a difference in your retail environment.
